Hello, my name is Joe and i'm a spanish student of informatic engineering. I'm using RationalRose Enterprise edition to develop my project but I had a dificult with REI and I wish you could help me. See, I need to make a specialitation by code from Delphi 5.0 using REI and COM objects but I don't find way to obtein the figure 2.
I try with:

```
RD is a  RoseClassDiagram Object ;
RM is a RoseModel Object;
 ……
  RM:=AppObject.CurrentModel;
  RD:=RMo.RootCategory.ClassDiagrams.GetFirst('Main');
  Person:=RM.RootCategory.AddClass('Person');                //I'm Adding tree classs
  Man:=RM.RootCategory.AddClass('Man');
  Woman:=RM.RootCategory.AddClass('Woman');
  RD.AddClass(Person);     RD.AddClass(Man) ;    RD.AddClass(Woman);

  R1:=Man.AddInheritRel('Born a Man' ,Person) As RoseRelation;
  R2:=Woman.AddInheritRel('Born a Woman' ,Person) As RoseRelation;
  RD.AddRelationView(R1);
  RD.AddRelationView(R2);
```

But I never obtain the figure 2, I alwais obtain figure 1 and however drawing directly in Rose without REI I can draw the figure 2 . This is my problem and I had tried to change by code Format->styleline->rectilinear and make a layout too, ¿How to change this value using REI or scripting?.
Well ,this is all, sorry my bad english and I hope you can help me because I need it to find the solution.
Regards from Spain, Thank you. (email: clarad@mixamil.com)
