Seminole Highway Interchange
Project ID 5300-02-09
Dane County
Earth Tech project 102235

On Wednesday, January 9, 2008, I emailed David Vogt, Deputy Executive Director of The Bicycle Federation of Wisconsin (BFW), a pdf copy of the proposed work for the Seminole Highway Interchange project. This is the same aerial map that will be shown at the January 10, 2008 Public Information Meeting at Cherokee Middle School. Pavement markings, including bike lane layouts, were shown on the map.

On Wednesday, January 9, 2008, I called David Vogt (608-251-4456) to discuss the Seminole Highway Interchange project with him, and to find out if the BFW had any comments or concerns with the bike lane layout through the interchange.

David made the following comments:

- The BFW (and David) fully supported the proposed work at the Seminole Highway Interchange, and said the signals have been needed for a long time to improve the flow of both vehicles and bicycles through the area.
- David had looked over the bike lane layouts, and felt they accommodated the bicycle needs very well. He was especially glad to see the bike lane located between the through lane and the right turn lane for northbound bicyclists at the South Frontage Road intersection (south side).

I informed David of the upcoming Public Information Meeting on Thursday, January 10, 2008 at the Cherokee Heights Middle School cafeteria. He said he'd try and make it.
