## ❶ Kexi API docs missing in the calligra section

☐ Open, Needs Triage     ✸ Custom Policy

### Description

Hi,
Kexi API docs missing in the calligra section https://api.kde.org/bundled-apps-api/calligra-apidocs/

I would think it may be related to the fact that since version 3 Kexi code is in a separate repo kexi.git. Please advice what can be done to fix it.

Hi,

I have on idea about this part. Maybe Kexi and all Calligra should move to the frontpage? This means generated by kapidox. I haven't tried now, but well, why not?

Who is the Calligra global maintainer? I would need to speak with him (or anyone else who has an overview of the project) to understand how it should be organized.

Yes, at least for Kexi and its libs I plan to move to kapidox   **T3749**  .

Asking on calligra-devel@kde.org makes sense as Calligra is a meta project with a group of maintainers that happen to read that list.
OK?

I'm not on the mailing list, so it won't be too early. As part of Calligra, Kexi shoud come in the same time, all together, IMHO in the same product.

I don't have time to chase all projects, so maybe discuss about it on the mailing list?

Cheers,
Olivier

Yes, this sysadmin discussion is apparently hidden?

Regarding the same time, if repositories are independent, I'd like have possibility to improve the docs and publish independently, so one app is not blocking others. Is that possible?
For the record, Kexi is in kexi.git for example, all other apps are in calligra.git.
