

Foil-Like Effects in UV-Flexo Printing

ULTRASTAR® UV is a brand new and unique one component UV curable flexo ink, based on the METALURE-dispersions which are well known for their mirror-like printed effects.

ULTRASTAR® UV can be selectively printed in-line and therefore is a cost effective and ecological alternative to metallised substrates and foil stamping in all applications within the wide- and narrow-web flexo market.

ULTRASTAR® UV is a free radical system with 100% solids in total.

METALURE® is manufactured for ECKART by  **AVERY DENNISON**
