

the universal operating system

Debian is a free operating system for computers of all kinds. It offers 63,000+ packaged utilities and applications, including software for businesses, programmers, scientists, educators and artists.

Continuous improvements and timely security updates are provided by a community of more than a thousand volunteers with subject area interest and expertise in the software they maintain – and all of the source code for that software is available for you to read, edit and redistribute.

To learn about Debian and to obtain a copy that you can run and optionally install, scan the QR code above or visit the website: <https://www.debian.org>
