Subject: RC9 - Print from Search AVs Continue

Hello Batpeople ,

Since RC1 I have consistently gotten an AV at address 00000000. Read address 00000000. when printing a message found as the result of a search. I get this message only when printing to my default printer "FinePrint" (a software printer that redirects to a hardware printer of choice). I do not get this message when printing the same messages when viewed for the normal message pane. The Bat hangs on the AV message.

I can duplicate this page printing to an Adobe PDF (another software printer) and I get an AV at address 04182A02. Write address of 082AD910.

To duplicate this error:

- 1) Do a search.
- 2) Open a message from the found list.
- 3) Print the message to a software printer such as FinePrint or Adobe PDF.

--

Best,
Richard
